

# THE GRABBER

Don't let it go down the drain!

- Ever lose a tool or other important item down the drain? Avoid digging up costly mistakes with the new Picote **Grabber**. Simply select and attach the best jaws for the job and you're ready to reclaim a tool or item, weighing up to 35kg/80lb. Push the cable into place and switch on the air supply to get a grip on the object. Fits in DN100/4" or larger pipes.
- The customised steering function allows the grabbing head to rotate due to the steering cable inside, making it much easier to grip the item. Pull the tool out of the drain and then simply turn off the air to release it.
- Use our special shaft connectors to extend your Grabber in 10m/32ft increments.
- Operate the Grabber with your air compressor. Required 8-10bar/116-145 PSI.      Maximum 10bar/145 PSI.
